# **1. Executive Summary**

As a student, did you ever sit in class trying to listen to what your teacher is trying to say, but can't pay attention to her because you're too distracted by the growls in your stomach? Have you ever forgotten your lunch at home? Did you ever grow tired of the food choices at your campus? With Hermes, those days are over. Hermes is here to provide SFSU students, staff, and faculty with plenty of food options, right at their fingertips, with fast delivery times, straight to their doorstep! Hungry on a dark, rainy night? No problem! Students can stay in their dorm, order food, and finish their homework while their food arrives. No more long, hasty walks to Stonestown Mall's packed food court. No more being late to class because of the long waiting lines at Cafe Rosso. No more dangerous late night MUNI rides just to get some deliciously warm dumplings.

Online food delivery is a billion-dollar industry and there's no doubt SFSU students, staff, and faculty are already using apps such as Door Dash and Uber Eats to get their food delivered. However, none of the popular food delivery apps cater to the needs of SFSU students and faculty like we do. We are here to make their customer experience as enjoyable and convenient as possible. Our goal is to deliver food to any location you can think of within SFSU campus grounds at lightning fast speeds. Because all deliveries made through our app are delivered to campus, delivery drivers can make less round trips, decreasing delivery times and lowering operation costs for restaurants and drivers. Restaurants go through a straight forward sign up process where they're guided step by step through the registration and menu creation process. There's no better way to gain loyal and regular customers than being the go-to restaurant for the campus. A restaurant owner can obtain immediate exposure to the entire student body and faculty staff, and the drivers are equipped with a built-in campus map so they never get lost. It's as easy as that! Once restaurants are signed up, customers can joyfully browse through any nearby restaurant and place their orders.

Hello there, we are a team of six dedicated computer science students with dreams of making campus life more enjoyable for everyone. We hope to learn as much as we can about e-commerce in general, as well as the ever-growing online food delivery industry.

## **2. List of main data items and entities**

### **Main terms**

1. **Guest:** A user that has not registered
2. **User:** Registered drivers, restaurant owners, and SFSU students / faculty
3. **Customer:** Faculty and Students who are registered and are ordering food
4. **Restaurant:** A business that prepares and serves food and is registered
5. **Administrator:** The administrator of the database
6. **Driver:** An person who delivers food from restaurants to campus
7. **Order:** An order placed by User
8. **Restaurant Owner:** A user that owns a restaurant and registered
9. **Log in.** Not login or sign in or signin.
10. **Register.** Not signup or sign up.
11. **Cuisine.** Used to refer to food types/categories like Italian, Indian, etc.
12. **UserType** indicates whether the user is a customer, driver, etc.

### **Types of Users (In terms of permissions)**

1. **Guest (NOT REGISTERED)**
  - 1.1. Has limited access to the website because they are not registered
  - 1.2. Has permission to access as much of the website as possible without having to register (lazy registration).
  - 1.3. Has permission to sign up as a registered user if a student or faculty.
2. **Customer (REGISTERED student/faculty)**
  - 2.1. Has all the permissions as the guest and more
  - 2.2. Has permission to buy and place food orders from approved restaurants.
3. **Administrator**
  - 3.1. Has special permission to the database to perform maintenance and approve restaurants.
4. **Restaurant Owner (MUST REGISTER AND LOGIN)**
  - 4.1. Has permissions to upload more menu items to their online restaurant menu
  - 4.2. Has permission to remove items from their online restaurant menu.
5. **Delivery Driver (MUST BE REGISTERED)**
  - 5.1. Has permission to know what the customer ordered
  - 5.2. Has permission to know the location of the requested customer order
  - 5.3. Has permission to view unclaimed delivery orders
  - 5.4. Has permission to select an unclaimed delivery and deliver it

### **Data structures**

1. **Menu:** A collection of food items
  - 1.1. Items
2. **FoodItem:** An object that contains the following fields:
  - 2.1. Name
  - 2.2. Price

- 2.3. Size
- 2.4. Description
- 3. **Restaurant:** A restaurant object that contains:
  - 3.1. Name
  - 3.2. Address
  - 3.3. Menu
  - 3.4. PriceRating
  - 3.5. Description
  - 3.6. Cuisine
  - 3.7. ImagePath
- 4. **Order:** An object that contains details about a specific order such as:
  - 4.1. Total
  - 4.2. Customer
  - 4.3. CreatedAt
  - 4.4. DeliveryAddress
  - 4.5. Items
  - 4.6. RestaurantName
- 5. **User:** An object containing details about the user.
  - 5.1. Name
  - 5.2. Email
  - 5.3. Address
  - 5.4. Password
  - 5.5. Type

## Main Entities

1. **Account:** The account entity is in charge of keeping track of the entities that are tied to the user's specific account such as current orders and past purchases.
  - a. **Guest:** A person who is using the website but is not registered. It is Unknown to whether they are a student, faculty, driver, or restaurant owner.
  - b. **User:** Any student, Driver faculty, restaurant owner who is registered and is logged into their account
  - c. **Restaurant Owner:** Special account for restaurant owners
  - d. **Administrator:** Special account that has access to statistical information about the database to provide maintenance.
2. **Restaurant:** Holds the following sub fields,
  - a. **Hours:** Hours restaurant is open
  - b. **Address:** The restaurant's physical address
  - c. **Restaurant Owner:** The user that is registered and claimed the restaurant
  - d. **Menu:** List of food and drinks a customer can order
  - e. **MenuItem:** food or drink item listed in the meny.
  - f. **Order:** Has details about the order such as menu items purchased, delivery address, total, etc.
3. **Delivery**

- a. **Delivery Driver:** an entity which has information pertaining to the delivery driver
- b. **Order :** Has details about the order useful for the driver such as delivery address, customer name, price total, etc.

### 3. Functional Requirements - Prioritized

#### Priority I

- 1. Restaurant Owner
  - 1.1. Restaurant owner shall be able to add / remove menu items.
  - 1.2. Restaurant owner shall be able add / remove their restaurant.
  - 1.3. Restaurant owner shall be able accept drivers to work for them.
  - 1.4. Restaurant owner shall be able to view orders.
  - 1.5. Restaurant owners shall be able to set their business own hours.
  - 1.6. Restaurant owners shall be able to set their business schedule.
  - 1.7. Restaurant owners shall be able to set their business' price rating.
  - 1.8. Restaurant owner shall be able to upload restaurant pictures.
- 2. User
  - 2.1. User shall be able to register for an account.
  - 2.2. User shall be able to edit their account information.
  - 2.3. User shall be able to login to the website.
- 3. Customer
  - 3.1. Customer shall be able to add / remove products to the shopping cart.
  - 3.2. Customer shall be able to browse restaurants.
  - 3.3. Customer shall be able to set their own location for delivery.
  - 3.4. Customer shall be able to search restaurants by category.
  - 3.5. Customer shall be able to search restaurants by name.
  - 3.6. Customer shall be able to filter search results by restaurant price.
- 4. Driver
  - 4.1. Driver shall be able to access a navigation map.
  - 4.2. Driver shall be able to have access to a campus map.
- 5. Administrator
  - 5.1. Administrator shall be required to approve restaurants.
  - 5.2. Administrator shall be able to remove accounts.

#### Priority II

- 1. Restaurant Owner
  - 1.1. Restaurant owners shall be able to close for multiple days.
  - 1.2. Restaurant owner shall be able to add menu item size options.
  - 1.3. Restaurant owner shall be able to see their order history.
- 2. User
- 3. Customer
  - 3.1. Customer shall be able to receive order status notifications.

- 3.2. Customer shall be able to see their order history.
4. Driver
  - 4.1. Driver shall be able to update the order status.
5. Administrator

### Priority III

3. Restaurant Owner
  - a. Restaurant owner shall be able upload menu item pictures.
  - b. Restaurant owner shall be able to add multiple restaurants.
  - c. Restaurant owner shall be able to add extra topping options to their menu items
4. User
5. Customer
  - a. Customer shall be able to cancel order for free within a penalty-free time limit.
  - b. App shall give users promotions / deals.
6. Application
  - a. App shall update driver's location for the customer to see.
7. Driver
8. Administrator

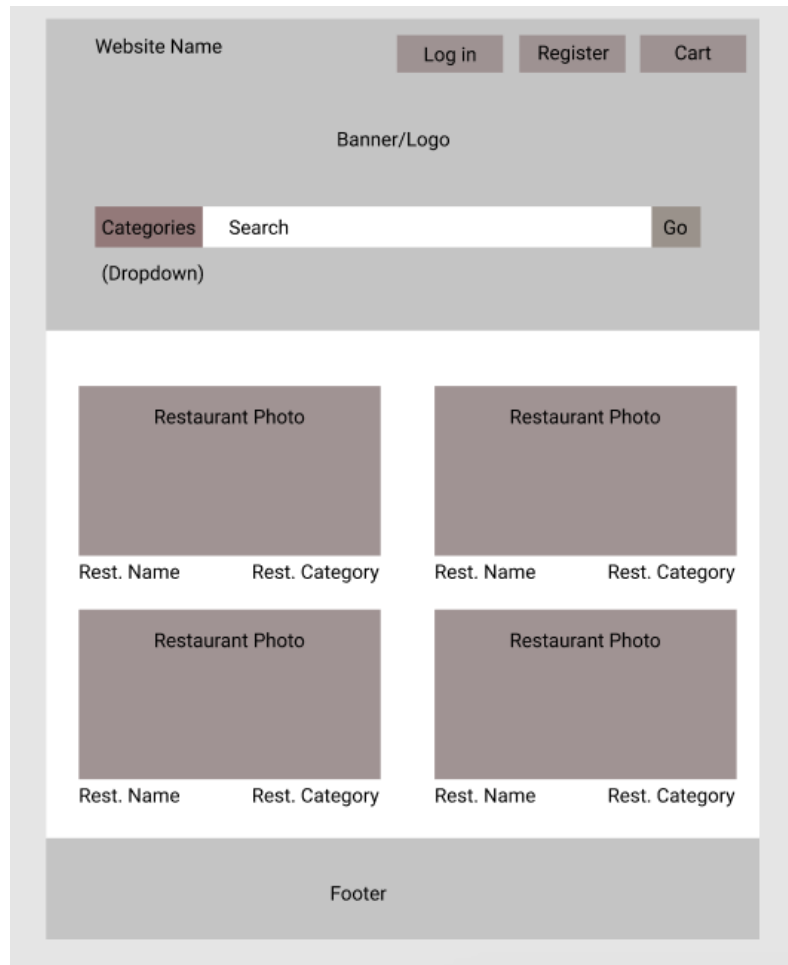

## 9. UI Mockups and Storyboards

Student : Tony - a full time college student	Use Case 1: Hungry, busy student order food at night to their dorm.
 <p>Pain points</p> <ul style="list-style-type: none"> <li>• Does not drive</li> <li>• Does not like to walk around at night</li> <li>• Is always in a rush</li> <li>• Is on a small budget</li> <li>• Is worried about covid safety</li> </ul> <p>Goals</p> <ul style="list-style-type: none"> <li>• Eat healthy</li> <li>• Succeed in school</li> </ul> <p>Skills</p>	<p>Tony is a hungry student with a craving for pizza. Unfortunately it's dark outside, he doesn't have a car, and he's scared to walk to a restaurant all by himself. Instead, he decides to use our website app to get his food delivered straight to his dormitory's well-lit entrance. He goes on our website app and browses through all the nearby pizza places, checking out their menu items as well as their price. After deciding on his order, he places it, gets an order confirmation, and now waits for the driver to get and deliver his food. Tony realizes that he is even more happy that he decided to get the food delivered because now he can get back to finishing his homework while he waits! When the delivery driver arrives, he gets a notification that they are waiting at the entrance of the dorm. Tony is happy that he was able to find food at this time of night, and that he didn't have</p>

- |   |   |
|---|---|
| <ul style="list-style-type: none"><li>• Continuously using the phone</li><li>• Quick at adapting to new technologies</li><li>• Able to navigate applications and websites</li></ul> | to walk out in the dark, cold, foggy San Francisco streets. |
|---|---|

**Tony goes to the website to order food because he knows that the restaurants deliver to campus. Tony goes to the Home Page where he can search and browse the restaurants.**

**He finds a restaurant he wants to order from and browses their menu.**

<b>Delivery Person: Marco</b> - main provider for family looking for flexible hours	<b>Use case 2:</b> Driver navigates campus and makes deliveries
---	---

Pain point:

- Not knowing the city (where to deliver)
- Not knowing the campus

Skills:

- Driving (license)
- Navigation
- Customer service
- Able to use new technology

Goals:

- Earn money
- Get to know the city better
- Learn customer service
- Get food discounts

Marco is a delivery driver for a restaurant that is already registered with our website app. After going through the signup process, he is now able to see incoming customer orders to the restaurant. Since the drop off locations are always to the SFSU campus, Marco can take multiple orders with him and deliver them all once he gets to campus instead of having to go back and forth. A map will let Marco know the directions to the drop off location, which is always some place around the SFSU campus. He's never been to the SFSU campus so he's also glad that there's a campus map available for reference as the navigation map doesn't show building numbers. When he gets there, he goes to the building where the delivery needs to be made, the customer comes, pays him, and Marco can now deliver more orders until he runs out and has to go back to the restaurant.

**Marco is an employee of a restaurant that is registered on our website. He goes to our website to register as a driver for the restaurant that he works at. Marco goes to the HomePage and selects the "Register" icon.**

<b>School Staff: Danielle</b> - is a full time professor	<b>Use Case 3:</b> Professor orders food to meeting room
--	--

Pain point:

- Safety
  - No-contact delivery
- Convenience
  - Time
  - Distance
  - Deliver to classroom (during meetings, etc)
- Budget
  - On a small salary

Skills:

- Teaching
- Able to use web applications
- Strong understanding of new technology
- Usually has a computer/ or laptop nearby

Goals:

- Help students

Danielle is a full time professor who does not seem to have the time to grab a bite to eat. Danielle has spent the entire morning teaching and helping out her students she forgot to prepare for her staff meeting. She knows that her meeting is at noon and needs to provide lunch for her fellow colleagues. She needs something quick and appetizing to order for herself and colleagues. She goes to our website app and searches for restaurants that can deliver to the campus building where the meeting is being held. She selects the restaurant and chooses what she wants to order for her and her colleagues. She is excited to use the website app and shows her colleagues how easy it is to use it. She gets a notification with the order confirmation as well as the information about the delivery driver. When the delivery driver is in the building, she pays the driver, and gets her food. She is strongly worried about covid safety and was content to see that the delivery driver was respecting her safety. With this positive experience she recommends the website app to her students and colleagues and decides to use it frequently since she is always in a rush.

**Danielle is a professor who is in a rush and needs to order food for herself and colleagues. Danielle goes to our website and looks at the featured restaurants at**

the bottom. Danielle chooses the categories button to browse restaurant types. Danielle selects the category and selects the restaurant that she thinks would be more appealing to her colleagues.

<p><b>Restaurant Owner: Miguel-</b> brand new to the restaurant industry looking for ways to expand business</p>	<p><b>Use Case 4:</b> Restaurant owner goes through entire registration and advertising process</p>
<div data-bbox="170 422 589 690" data-label="Image"> </div> <p>Pain point:</p> <ul style="list-style-type: none"> <li>• Advertising</li> <li>• Customer service</li> <li>• Promotions/deals</li> <li>• Competition</li> <li>• Online presence</li> <li>• Efficiency</li> <li>• Reviews/Ratings</li> <li>• Delivery service</li> <li>• Cost effective</li> <li>• Popularity with students</li> </ul> <p>Skills:</p> <ul style="list-style-type: none"> <li>• Providing great food</li> <li>• Quick service</li> <li>• Not very technologically diverse</li> <li>• Has a difficult time using new technology</li> <li>• Knows how to use a website</li> </ul> <p>Goals:</p> <ul style="list-style-type: none"> <li>• Expand his business and have more clientele</li> <li>• Top rate and become popular</li> </ul>	<p>Miguel is a brand new restaurant owner who is close to the University. He notices that many of the college students are quickly ordering meals. Miguel started to hear the students talk about a website app where they can order food and have it delivered to campus. He wants to have more exposure to his restaurant and make it approachable for the college students. Miguel decides to register his restaurant on the website app. He is not very good with using applications, but is in great need to bring more business to his restaurant. He goes to our website app and starts to see that multiple small restaurants are being listed and are providing reasonable prices for their food. Thinking about how popular his restaurant has become within the college students he wants to make sure that it is approachable for them. Without much hesitation Miguel registers to have his restaurant listed on the application and is guided with the next steps on how to enroll his restaurant, and add new menu items. When a driver registers on the app, they add the email or the restaurant owner they are going to work for. After the driver registration, the restaurant owner gets a notification asking them to approve or decline the driver. After the restaurant menu gets approved by an administrator, he is excited to see he's starting to receive orders and his driver is ready to fulfill those deliveries.</p>

Miguel wants more exposure to his restaurant and make it approachable for the college students. Miguel decides to register his restaurant on the website app. He clicks the “Register” button.

<p><b>Admin: Jess-</b> an employee who wants to provide a safe atmosphere for the users and restaurants</p>	<p><b>Use Case 5:</b> Administrator approving and updating the website app</p>
<div data-bbox="196 506 407 800" data-label="Image"> </div> <p>Pain point:</p> <ul style="list-style-type: none"> <li>• Buggy software</li> <li>• No UI</li> <li>• Bad customers</li> <li>• Bad drivers</li> <li>• Bad restaurants</li> <li>• Bad reviews</li> </ul> <p>Skills:</p> <ul style="list-style-type: none"> <li>• Attention to detail</li> <li>• Integrity and honesty</li> <li>• Quality</li> <li>• Has high technological skills</li> <li>• Very quick learner</li> <li>• Always has a technological device</li> <li>• SQL</li> </ul> <p>Goals:</p> <ul style="list-style-type: none"> <li>• Provide the best service</li> </ul>	<p>Jess is an employee who is fascinated with computers and is always on the lookout for new ways to bring a community together. She currently works as the administrator for our website application and she is continuously reviewing restaurant applications, menu items, and reviews. She has to approve all postings that the restaurant posts before they are published to the website. She is happy that she gets to work with the MySQL Workbench, as the UI makes it easy to do her job. Jess is the facilitator and likes to keep everyone in check. Jess communicates with the drivers and restaurants reassuring that they provide safe service. Jess' goal is to filter out all profanity and reach out to restaurants and drivers who receive bad reviews. She wants to make sure that all restaurants are safe and inviting to all users, and that they follow our guidelines and community standards. Jess wants to make sure that the website app is frequently used and that it becomes popular among the SFSU campus as well as restaurant owners and drivers.</p>

## 6. Identify *actual* key risks for your project at this time

Skill risks:

Not everyone is familiar or has much experience with the stack we're using. To mitigate this risk, those who have more experience with it will teach others. Also, tasks will be assigned according to their skills. We will match teammates up with those who are more knowledgeable with those who are not.

Schedule risks:

Our schedules are pretty flexible, so we haven't had any trouble setting up meetings and attending them. We are on track for delivery schedule for the VP.

Technical risk:

We don't have any technical risks at the moment. We don't foresee any in the future.

Teamwork risks:

Everyone seems to be getting along with each other and everyone contributes.

Legal/content risks:

We are making sure that all images we use are not copyrighted, and we are not asking for any sensitive information.

## **7. Project management**

We will start using Trello. The team lead will assign general tasks to the front end and back end, then the FE and BE leads will break those down and assign specific tasks. With Trello, we can all see who is in charge of what, as well as which things still need to be done or which ones are still in progress. This should give us a better overview of our progress and help us come up with time estimates for accomplishing our milestones as well as get a better feeling of whether we're behind schedule or not.

Also, we will continue having our regular meeting during class on Wednesdays and at 10AM every Friday as a group, while FE and BE teams can set up their individual meetings throughout the week as they see fit. Lastly, we also use Discord and Google Docs to collaborate.
